

STOP STRIPPING TODAY

-  Covalent Bonding
-  1K Single Component
-  Stain Resistant
-  Extreme Hardness
-  UV Stable
-  Spray Applied

Coval Vinyl is a thin-film, single component coating designed to protect vinyl flooring from surface wear, stains, and harsh chemicals. It creates a covalent bond with the substrate and is easily and quickly applied with an acetone pump sprayer. Coval Vinyl is used over any VCT, LVT, or other laminate flooring substrates to reduce maintenance costs and save you money over time.

Coval Vinyl is easy to clean, eliminating the need for continued use of strippers, waxes, and harsh cleaning detergents and their disposal. This provides an environmentally friendly alternative to traditional vinyl floor maintenance. Coval coatings contain less than 100 g/L VOCs and exceed SCAQMD Rule 1113 requirements for air quality; as well as contain no known carcinogens under Proposition 65, California's Drinking Water and Toxic Enforcement Act of 1986.

Coval Vinyl is the solution you need to stop stripping and waxing your vinyl floors forever.
For more information visit us at www.coval-group.com or call +1-281-566-4277.

VCT: Coval Vinyl allows you to revitalize vinyl composite tile, adding a durable layer of protection to protect from scuffing, scratches and stains.

LVT: LVT has a factory finish with limited properties in most cases, it will scuff and stain eventually. Apply Coval Vinyl over the existing factory finish to restore and protect it to like-new condition.

Other Laminate Floors: Wood and vinyl laminates can have their lifecycle increased and appearance restored with Coval Vinyl.

Achieve ultimate protection on nearly any substrate with these related products. Contact your authorized Coval product representative or visit our website for details.
